

LayoutVision Custom Layout Design Documentation Samples

A variety of views of the layout design are provided with each project in the form of Adobe Acrobat (.pdf) files and native 3rd PlanIt CAD files. Hard-copy color printouts are also provided on large 11"X17" sheets. The client also receives a back-up CD with copies of all files.

Each deck of multi-deck designs (such as those with hidden below-table staging or with multiple visible decks) is shown in its own views.

Overall Design View (top right)

This image is an overhead 2-dimensional view showing the locations of all tracks, rough scenery outlines, and structure footprints. Labels indicate key location, industries, scenic features, etc.

Component View (middle right)

This view of the design is intended to be the actual construction plan for the layout. Key curve centers are located on a (typically) 1-foot grid along with locations and specifications for all turnouts, crossings, etc. Radii and turnouts are color coded or called out specifically.

For an additional charge, the component view files may optionally also be provided as full size (1:1) .pdf files for printing by the client at a local print shop.

Additional Views

For complicated or compact scenes, additional views may sometimes be provided showing structure identification (bottom right) or other information. These are not always necessary and vary from project to project.
